Parameters Included

About This Test

An ACTH (adrenocorticotrophic hormone) test measures the level of ACTH in the blood, which is produced by the pituitary gland. ACTH stimulates the adrenal glands to produce cortisol, a hormone that helps regulate metabolism, stress response, and inflammation. Elevated ACTH levels may indicate conditions such as Cushing's disease or Addison's disease, while low levels can suggest adrenal insufficiency or pituitary dysfunction. The test helps diagnose and monitor disorders related to adrenal gland and pituitary gland function.
