About This Test

The anti-diuretic hormone (ADH) test measures the level of ADH, also known as vasopressin, in the blood. ADH is produced by the pituitary gland and regulates water balance by controlling the amount of water reabsorbed by the kidneys. Elevated or reduced levels of ADH can indicate disorders such as diabetes insipidus, where there is insufficient ADH production, or the syndrome of inappropriate ADH secretion (SIADH), where there is excessive ADH. The test helps diagnose and manage these conditions.
