About This Test

Aldolase is an enzyme that plays a role in the glycolytic pathway, which is crucial for energy production in cells. The aldolase test measures the concentration of this enzyme in the blood. Elevated levels can indicate muscle damage or disease, such as muscular dystrophy, polymyositis, or rhabdomyolysis. It can also be elevated in conditions like liver disease or certain cancers. The test helps diagnose and monitor conditions involving muscle or tissue damage and assess overall metabolic health.
