

ANTI DSDNA - ANTI DOUBLE STANDARD DNA ELISA

Profile Details | 1 Parameters
Fasting: Overnight fasting for 9-12 hours | Report Time: Next Day

Specimen Required: Blood

Price- ₹1400 **₹830**

Parameters Included

About This Test

Anti-dsDNA (anti-double-stranded DNA) antibodies measure the presence of antibodies directed against double-stranded DNA, a key component of the cell nucleus. Elevated levels of these antibodies are commonly associated with systemic lupus erythematosus (SLE), an autoimmune disease where the immune system mistakenly attacks the body's own tissues. Anti-dsDNA antibodies are often used to help diagnose SLE, monitor disease activity, and evaluate the effectiveness of treatment. While elevated anti-dsDNA levels are highly indicative of SLE, they can also be found in other autoimmune disorders, though less commonly. The test is particularly useful for assessing the severity of kidney involvement in lupus, as these antibodies often correlate with renal disease in SLE.
