ANTI HBC- TOTAL, HEPATITIS B CORE - TOTAL ANYIBODIES

Profile Details | 1 Parameters

Fasting: Fasting not required | Report Time: Within 2 days

Specimen Required: Blood

Price- ~~₹1599~~ **₹899**

Parameters Included

About This Test

Hepatitis B core antibody total (anti-HBc total) is an important marker used in the diagnosis of Hepatitis B virus (HBV) infection. It detects antibodies that are produced in response to the core antigen of the virus. The presence of anti-HBc total indicates either current or past infection with HBV, regardless of whether the infection has resolved or become chronic. This antibody is typically detectable shortly after exposure to HBV and remains present for life, providing lifelong immunity in those who have cleared the virus. In chronically infected individuals, anti-HBc total is also present alongside other markers like HBsAg (surface antigen) and anti-HBs (surface antibody). The test helps in determining the stage and immune status of HBV infection, guiding healthcare providers in managing patient care and vaccination strategies. Interpretation of results requires consideration of additional HBV markers to differentiate between acute, resolved, chronic, or vaccinated states.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable
