# ANTI HISTONES ANTIBODY

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 5 Days

**Specimen Required:** Blood

**Price-** ~~₹3000~~ **₹2099**

## Parameters Included

## About This Test

An **anti-histone antibody** test measures the presence of antibodies against histone proteins, which are key components of the chromatin in cells. Here's what this test assesses: 1. **Autoimmune Diseases**: Helps diagnose certain autoimmune disorders, particularly drug-induced lupus erythematosus (DILE) and systemic lupus erythematosus (SLE). Anti-histone antibodies are often found in patients with these conditions. 2. **Drug-Induced Lupus**: In cases where a patient develops lupus-like symptoms due to medications, the presence of anti-histone antibodies can indicate drug-induced lupus. 3. **Disease Monitoring**: Can be used to monitor disease activity and response to treatment in patients with autoimmune diseases associated with histone antibodies. 4. **Differentiation of Lupus Types**: Assists in differentiating between drug-induced lupus and other forms of lupus or autoimmune conditions that may present with similar symptoms. In summary, the anti-histone antibody test measures antibodies against histones to help diagnose and monitor autoimmune disorders, particularly drug-induced lupus and systemic lupus erythematosus.
