About This Test

The anti-NMO (anti-neuromyelitis optica) antibody test measures the presence of antibodies against aquaporin-4, a protein found in the central nervous system. These antibodies are associated with neuromyelitis optica (NMO), an autoimmune disorder that primarily affects the spinal cord and optic nerves, leading to symptoms such as vision loss and paralysis. The presence of anti-NMO antibodies helps in diagnosing NMO, distinguishing it from other similar conditions like multiple sclerosis, and guiding appropriate treatment strategies.
