About This Test

The Anti-Streptolysin O (ASO) test measures the level of antibodies against streptolysin O, a toxin produced by group A Streptococcus bacteria. Here's what it indicates: - **Streptolysin O:** A toxin produced by Streptococcus pyogenes (group A strep) that can cause cell damage. - **ASO Antibodies:** The immune system produces antibodies against streptolysin O when infected by group A strep. **Test Purpose:** - **Diagnosis of Recent Strep Infection:** Elevated ASO levels suggest a recent or pas infection with group A strep. - **Rheumatic Fever and Glomerulonephritis:** Helps diagnose complications like rheumatic fever or post-streptococcal glomerulonephritis, which can develop after a strep infection. **Interpretation:** - **High ASO Levels:** Indicate a recent streptococcal infection. - **Normal ASO Levels:** Do not rule out stre infection, especially if the test is performed too early or if the individual has a different immune response. The ASO test aids in diagnosing and managing complications arising from streptococcal infections.
