

ANTI THYROID ANTIBODIES (AMA+ ATG) PANEL

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹2900 **₹1360**

Parameters Included

About This Test

****AMA (Anti-Mitochondrial Antibodies)**** and ****ATG (Anti-Thyroid Globulin Antibodies)**** are two different types of antibodies tested to diagnose autoimmune conditions: 1. ****AMA (Anti-Mitochondrial Antibodies):**** These antibodies target mitochondria, the energy-producing structures within cells. High levels of AMA are primarily associated with primary biliary cholangitis (PBC), a chronic liver disease that damages the bile ducts. Testing for AMA helps in diagnosing and monitoring PBC. 2. ****ATG (Anti-Thyroid Globulin Antibodies):**** These antibodies target thyroid globulin, a protein produced by the thyroid gland. Elevated levels of ATG can indicate autoimmune thyroid disorders such as Hashimoto's thyroiditis or Graves' disease. Testing for ATG helps diagnose thyroid autoimmune conditions and guide treatment. Both tests are important in identifying specific autoimmune diseases and assessing disease activity or progression.
