

APTT- PTTK

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹600 **₹349**

Parameters Included

About This Test

The APTT (Activated Partial Thromboplastin Time) test measures the efficiency of the intrinsic and common pathways of the blood coagulation cascade. It evaluates how well and how quickly blood clots by assessing the function of various clotting factors, including Factors VIII, IX, XI, and XII. During the test, a blood sample is mixed with an activator and a calcium chloride solution, and the time it takes for a clot to form is measured. Prolonged APTT can indicate deficiencies or dysfunctions in these clotting factors, which may be due to bleeding disorders like hemophilia, or the effects of anticoagulant medications. The APTT test is crucial for diagnosing and managing bleeding disorders and for monitoring patients undergoing anticoagulant therapy.
