

ARTHRITIS PANEL 2 WITH ANTI CCP @ 35 TESTS

Profile Details | 7 Parameters

Fasting: fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹2500 **₹1499**

Parameters Included

- CBC
- ESR - Erythrocyte Sedimentation Rate
- CRP, C-Reactive Protein
- Rheumatoid factor (RA Factor)
- ASO-(Antistreptolysin O)
- Uric Acid
- Anti CCP

About This Test

An **Arthritis Panel with CCP** is a blood test used to help diagnose different types of arthritis, particularly **rheumatoid arthritis (RA)**. The panel typically includes several tests, one of the most significant being the **anti-CCP (cyclic citrullinated peptide) antibody** test. This test detects the presence of specific antibodies that target proteins in the joints, which are commonly present in individuals with RA. A positive anti-CCP result is highly indicative of RA and is used to help distinguish it from other forms of arthritis. The panel may also include tests for **rheumatoid factor (RF)**, **C-reactive protein (CRP)**, and **erythrocyte sedimentation rate (ESR)**, all of which help assess inflammation and disease activity. An arthritis panel with CCP is valuable for confirming a diagnosis, assessing the severity of the disease, and monitoring the effectiveness of treatment. It can also help differentiate RA from other inflammatory or autoimmune conditions.
