ARTHRITIS PANEL 3 WITH ANA ELISA @36 TESTS

Profile Details | 8 Parameters

Fasting: Overnight Fasting for 9-12 hours | Report Time: N/A

Specimen Required: Blood

Price- ~~₹3000~~ **₹2099**

Parameters Included

- CBC
- ESR - Erythrocyte Sedimentation Rate
- CRP, C-Reactive Protein
- Rheumatoid factor (RA Factor)
- ASO-(Antistreptolysin O)
- Uric Acid
- Anti CCP
- ANA-ELISA

About This Test

An **arthritis panel with ANA** (Antinuclear Antibody) test is a diagnostic tool used to help identify the presence of autoimmune disorders that affect the joints. The panel typically includes tests for several different antibodies, including ANA, rheumatoid factor (RF), and anti-CCP (cyclic citrullinated peptide) antibodies, among others. These tests help to distinguish between various types of arthritis, such as rheumatoid arthritis, lupus, and other autoimmune-related conditions. The **ANA test** specifically looks for antibodies that attack the body's own tissues, which is a hallmark of autoimmune diseases. A positive ANA test may indicate conditions like systemic lupus erythematosus (SLE) or scleroderma, though it can also be present in healthy individuals or in those with other conditions. By combining the ANA test with other markers, the arthritis panel provides a more comprehensive understanding of a patient's condition, helping doctors to make an accurate diagnosis and tailor appropriate treatment

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer*
