

ASA - ANTI SPERM ANTIBODIES

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹1890 **₹990**

Parameters Included

About This Test

The anti-sperm antibodies (ASA) test measures the presence of antibodies that target and bind to sperm. These antibodies can be produced by either the male or female immune system and may interfere with the sperm's ability to move and fertilize an egg. In males, the immune system may mistakenly identify sperm as harmful invaders and produce antibodies against them, often due to injury, surgery, infection, or a breakdown of the blood-testis barrier. In females, anti-sperm antibodies can develop in response to exposure to sperm, possibly affecting fertility by inhibiting sperm movement through the cervical mucus or attacking sperm before it reaches the egg. The ASA test is used in the evaluation of infertility, particularly when no other cause is identified. Elevated levels of anti-sperm antibodies can indicate an immune response that may contribute to difficulties in conceiving, guiding appropriate treatment options to improve the chances of successful fertilization.
