

BASIC ALLERGY SCREENING

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹1900 **₹750**

Parameters Included

About This Test

Allergy Screening Basic, often including tests like CBC (Complete Blood Count), AEC (Absolute Eosinophil Count), and IgE (Immunoglobulin E), helps evaluate allergic reactions and related conditions. - **CBC (Complete Blood Count)**: Provides a broad overview of blood cell health, including white blood cells, red blood cells, and platelets. It helps detect general health issues, including potential signs of infection or inflammation that may accompany allergies. - **AEC (Absolute Eosinophil Count)**: Measures the number of eosinophils, a type of white blood cell involved in allergic responses and asthma. Elevated eosinophil levels can indicate allergic conditions or parasitic infections. - **IgE (Immunoglobulin E)**: This test measures the level of IgE antibodies in the blood. Elevated IgE levels are commonly associated with allergic reactions, such as asthma, hay fever, and food allergies. Together, these tests help diagnose and monitor allergic conditions, identify specific allergens, and guide appropriate treatment strategies.
