BENCE JONES PROTEIN- BJ PROTEIN

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 2 Days

Specimen Required: Blood

Price- ~~₹1100~~ **₹580**

Parameters Included

About This Test

The Bence Jones protein test measures the presence of abnormal proteins, specifically light chains of immunoglobulins, in the urine. These proteins are produced by malignant plasma cells, often seen in conditions like multiple myeloma. Elevated levels of Bence Jones proteins indicate the presence of a plasma cell disorder and are used to diagnose and monitor multiple myeloma, assess disease progression, and evaluate treatment efficacy. The test is essential for identifying this specific type of proteinuria linked to hematological malignancies.
