BETA 2 GLYCOPROTEIN IGG

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Next day

Specimen Required: Blood

Price- ~~₹1499~~ **₹999**

Parameters Included

About This Test

Beta-2 glycoprotein IgG measures the levels of IgG antibodies that target the beta-2 glycoprotein I (β2GPI) protein in the blood. This test is primarily used to diagnose antiphospholipid syndrome (APS), an autoimmune disorder characterized by an increased risk of blood clots, recurrent miscarriages, and other pregnancy-related complications. Elevated levels of β2GPI IgG antibodies indicate an abnormal immune response, where the body mistakenly attacks β2GPI, leading to coagulation issues. The presence of these antibodies is a critical marker for APS and helps guide the management and treatment of patients at risk for thrombotic events and other complications associated with this syndrome.
