About This Test

The total bilirubin test measures the overall level of bilirubin in the blood. Bilirubin is a yellowish substance produced during the breakdown of red blood cells. It is processed by the liver, where it is converted into a form that can be excreted in bile. The test measures both direct (conjugated) and indirect (unconjugated) bilirubin. - ****Direct (conjugated) bilirubin**** is water-soluble and is excreted in bile. Elevated levels can indicate liver dysfunction or bile duct obstruction. - ****Indirect (unconjugated) bilirubin**** is not water-soluble and is transported to the liver for processing. High levels may suggest hemolysis (rapid breakdown of red blood cells) or issues with bilirubin processing in the liver. Measuring total bilirubin helps diagnose and monitor conditions like jaundice, liver diseases, and certain blood disorders.
