BUN - BLOOD UREA NITROGEN

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ~~₹195~~ **₹99**

Parameters Included

About This Test

A blood urea nitrogen (BUN) test measures the amount of urea nitrogen in the blood. Urea nitrogen is a waste product formed in the liver when the body breaks down proteins, and it is excreted by the kidneys. The BUN test is commonly used to assess kidney function and to diagnose or monitor kidney disease or dysfunction. Key points about the BUN test: - **Kidney Function:** Elevated BUN levels can indicate impaired kidney function or kidney disease, as the kidneys are less able to remove urea from the blood. - **Liver Function:** The liver produces urea; therefore, BUN levels can also reflect liver function. - **Hydration Status:** High BUN levels can be a sign of dehydration, while low levels might indicate overhydration. - **Diet and Nutrition:** High-protein diets or significant protein breakdown in the body can increase BUN leve The BUN test is often performed alongside other tests, such as creatinine, to get a more comprehensive picture of kidney health.
