About This Test

A calcitonin test measures the level of calcitonin, a hormone produced by the thyroid gland, in the blood. Calcitonin helps regulate calcium levels in the body by inhibiting bone resorption and promoting calcium excretion by the kidneys. Elevated calcitonin levels can indicate medullary thyroid carcinoma, a type of thyroid cancer, or other conditions affecting calcium metabolism. This test is used for diagnosing medullary thyroid carcinoma, monitoring treatment response, and detecting recurrence of the disease.
