About This Test

Carbamazepine, also known by brand names such as Tegretol and Mazetol, is a medication primarily used to treat epilepsy, bipolar disorder, and certain types of nerve pain. The test for carbamazepine measures the level of this drug in the blood to ensure it is within a therapeutic range and to avoid toxicity. Maintaining appropriate level is important for effectiveness and safety, as too little may not control symptoms, while too much can cause adverse effects like dizziness, nausea, or severe reactions. Regular monitoring of carbamazepine levels helps in adjusting dosages and managing potential side effects, ensuring optimal treatment outcomes for conditions being treated with this medication.
