

CARDIAC CARE RISK MARKER-ADVANCE

Profile Details | 7 Parameters

Fasting: overnight fasting for 9-12 hours | Report Time: SAME DAY

Specimen Required: Blood

Price- ₹4999 **₹2599**

Parameters Included

- LIPID Profile
 - HsCRP
 - CPK-MB
- Homocysteine
 - APOLIPOPROTEIN A1-APO A1
 - APOLIPOPROTEIN B - APO B
- Apolipoprotein B/A1 Ratio Apolipoprotein B and A1

About This Test

A cardiac risk marker is a biological indicator that helps assess an individual's likelihood of developing cardiovascular diseases. These markers can include lipid profiles, such as total cholesterol, LDL, HDL, and triglycerides, as well as specific proteins like C-reactive protein (CRP) and lipoprotein(a). Advanced cardiac risk markers may also encompass genetic factors, inflammatory markers, and imaging techniques that evaluate arterial health. By analyzing these indicators, healthcare professionals can identify patients at higher risk for heart attacks, strokes, or other cardiovascular events. This information aids in creating personalized prevention strategies, monitoring treatments, and improving overall heart health management.
