

CARDIAC CARE RISK MARKER- ESSENTIAL

Profile Details | 6 Parameters

Fasting: overnight fasting for 9-12 hours | Report Time: SAME DAY

Specimen Required: Blood

Price- ₹2900 **₹1699**

Parameters Included

- LIPID Profile
- CPK-MB
- APOLIPOPROTEIN B - APO B
- HsCRP
- APOLIPOPROTEIN A1-APO A1
- Apolipoprotein B/A1 Ratio Apolipoprotein B and A1

About This Test

Cardiac risk measures the likelihood of developing cardiovascular diseases, including heart attacks and strokes. It typically includes a combination of factors such as cholesterol levels (total cholesterol, LDL, HDL), triglycerides, blood pressure, blood sugar levels, body mass index (BMI), and lifestyle factors (smoking, physical activity, diet). Biomarkers like C-reactive protein (CRP) and lipoprotein(a) may also be assessed. Family history and age are important risk factors as well. Healthcare providers use these measurements to evaluate overall heart health, identify individuals at higher risk, and develop targeted prevention strategies or treatment plans to reduce the risk of cardiovascular events.
