About This Test

Cardiolipin antibodies measure the presence of autoantibodies against cardiolipin, a phospholipid component of cell membranes. These antibodies are often tested to diagnose antiphospholipid syndrome, an autoimmune disorder that increases the risk of blood clots, miscarriages, and other complications. Elevated levels of cardiolipin antibodies can indicate an increased risk of clotting disorders and help in evaluating the presence and severity of antiphospholipid syndrome. The test is used to guide treatment and monitor patients with suspected or confirmed autoimmune conditions.
