CHLORIDE

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ~~₹390~~ **₹199**

Parameters Included

About This Test

The chloride test measures the concentration of chloride ions in the blood. Chloride is an essential electrolyte that helps maintain proper fluid balance, acid-base balance, and overall electrical neutrality in the body. It works closely with other electrolytes such as sodium, potassium, and bicarbonate. Chloride is primarily ingested through die and absorbed in the intestines. Abnormal chloride levels can indicate various health issues. Elevated chloride levels, or hyperchloremia, can result from dehydration, kidne dysfunction, or excessive intake of saline solutions. Low chloride levels, or hypochloremia, can occur due to conditions like prolonged vomiting, diarrhea, or certain hormonal imbalances. Regular monitoring of chloride levels is crucial for diagnosing and managing conditions affecting electrolyte balance and overall health.
