

COMPLETE ARTHRITIS PANEL

Profile Details | 10 Parameters

Fasting: overnight fasting for 9-12 hours | Report Time: SAME DAY

Specimen Required: Blood

Price- ₹4700 **₹2999**

Parameters Included

- CBC
 - ESR - Erythrocyte Sedimentation Rate
 - CRP
 - Rheumatoid factor (RA Factor)
- ASO-(Antistreptolysin O)
 - Uric Acid
 - Anti CCP
 - ANA-ELISA
- C3-complement 3
 - C4 - complement 4

About This Test

An arthritis panel with ANA (Antinuclear Antibody), C3, and C4 is a blood test used to help diagnose autoimmune conditions, including various forms of arthritis such as rheumatoid arthritis and lupus. - **ANA**: Antinuclear antibodies are proteins that target the body's own cells. Elevated levels of ANA can indicate autoimmune diseases like lupus, rheumatoid arthritis, or other connective tissue disorders. However, a positive ANA result alone is not definitive for any one condition. - **C3 and C4**: These are components of the complement system, which plays a role in the immune response. Low levels of C3 and C4 can suggest that the body is experiencing an autoimmune attack, as these proteins are often consumed during immune reactions. By measuring ANA along with C3 and C4, doctors can gain insights into possible autoimmune inflammation affecting joints and other organs, aiding in the diagnosis and management of arthritis and related diseases.
