

CPK- NAC- CREATININE PHOSPHO KINASE -

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ₹399 ₹245

Parameters Included

About This Test

A CPK-NAC (Creatine Phosphokinase-N-acetylcysteine) test measures the level of creatine phosphokinase (CPK) in the blood after the addition of N-acetylcysteine (NAC), which helps stabilize and preserve the enzyme. CPK is an enzyme found in the heart, brain, and muscles, and its levels can indicate muscle damage or stress. This test is used to assess and monitor conditions like myocardial infarction, muscular dystrophy, and other muscle-related disorders by evaluating changes in CPK levels.
