DENGUE PROFILE ELISA

Profile Details | 3 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood

Price- ~~₹3200~~ **₹1599**

Parameters Included

- Dengue NS1 Antigen Elisa
- Dengue IgM ELISA
- Dengue IgG Elisa

About This Test

The Dengue IgG, IgM, and NS1 tests can be performed by two methods: Rapid test and ELISA, and both differ in accuracy, time, and usage. Rapid tests are quick screenin tests that give results within 15–20 minutes and are easy to perform at clinics or home collection settings. However, they are less sensitive and may sometimes give false positive or false negative results. On the other hand, ELISA (Enzyme-Linked Immunosorbent Assay) is a laboratory-based method that takes a few hours but provides mor accurate and reliable results. ELISA has higher sensitivity and specificity, making it better for confirmation of dengue infection. In terms of detection, both methods check NS1 for early infection and IgM/IgG for later stages, but ELISA can detect even low levels more precisely. Rapid tests are useful for quick initial screening, while ELISA is preferred for final diagnosis, monitoring, and clinical decision-making.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Same Day*
