About This Test

A DCT (Direct Coombs Test) measures the presence of antibodies bound to red blood cells. This test, also known as the direct antiglobulin test, involves adding anti-huma globulin (Coombs reagent) to a blood sample to detect if antibodies or complement proteins are attached to the red blood cells. It is used to diagnose conditions such as hemolytic anemia, autoimmune disorders, and transfusion reactions, helping identify causes of red blood cell destruction.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable
