About This Test

An estradiol test measures the level of estradiol, a form of estrogen, in the blood. Estradiol is a crucial hormone produced mainly by the ovaries in women, and in smaller amounts by the testes in men and by adrenal glands in both sexes. - **Women**: Estradiol regulates the menstrual cycle, supports reproductive health, and is involved in the development of secondary sexual characteristics. It also prepares the uterine lining for pregnancy. - **Men**: Estradiol helps with sperm maturation and maintaining a healthy libido. Measuring estradiol levels aids in diagnosing and managing various conditions, including menstrual irregularities, fertility issues, menopausal symptoms, ar disorders related to estrogen imbalance, such as polycystic ovary syndrome (PCOS) or estrogen-producing tumors.
