About This Test

The Entamoeba histolytica antibodies (Amoebic Serology IgG) test measures the presence of IgG antibodies specific to Entamoeba histolytica in the blood. Entamoeba histolytica is a protozoan parasite responsible for amoebiasis, which can cause symptoms ranging from mild gastrointestinal discomfort to severe dysentery. The presence of these antibodies indicates a past or current infection with Entamoeba histolytica. The test helps in diagnosing amoebiasis by confirming the body's immune response to the parasite. It is particularly useful in identifying chronic or asymptomatic infections and differentiating amoebiasis from other gastrointestinal disorders.
