

FACTOR V LEDAN MUTATION PCR

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 6 Days

Specimen Required: Blood

Price- ₹8500 **₹4700**

Parameters Included

About This Test

A Factor B LedaN mutation PCR test measures the presence of specific genetic mutations in the Factor B gene, which is part of the complement system involved in immune responses. This test uses polymerase chain reaction (PCR) technology to detect genetic variations that can affect the function of Factor B, potentially leading to immune system disorders or complement deficiencies. Identifying such mutations helps in diagnosing related conditions and guiding appropriate treatment and management strategies.
