

FACTOR-V (LEIDEN MUTATION) PCR

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: 6 Days, Processing On tuesday, Friday

Specimen Required: Blood

Price- ₹9999 ₹4999

Parameters Included

About This Test

Factor V Leiden Mutation PCR is a genetic blood test used to detect a specific inherited mutation in the F5 gene, known as the Factor V Leiden mutation. This mutation can increase the tendency of blood to form abnormal clots, particularly in the veins. The test is commonly advised in individuals with unexplained or recurrent blood clots, a family history of thrombosis, or certain pregnancy-related complications. It is performed using a blood sample and does not require fasting. PCR technology identifies the genetic change directly. The result helps doctors assess inherited clotting risk and determine whether further evaluation or preventive management may be appropriate.
