

FECAL ELASTASE

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 4 Days

Specimen Required: Stool

Price- ₹8400 **₹4990**

Parameters Included

About This Test

The fecal elastase test measures the level of elastase, an enzyme produced by the pancreas, in stool samples. Elastase is released into the digestive tract to help break down proteins. This test assesses pancreatic function by determining how well the pancreas is producing and secreting digestive enzymes. Low levels of fecal elastase can indicate pancreatic insufficiency, which may be due to conditions such as chronic pancreatitis, cystic fibrosis, or pancreatic cancer. Accurate measurement of fecal elastase helps in diagnosing and managing disorders related to inadequate pancreatic enzyme production.
