FEVER PACKAGE 1

Profile Details | 5 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood, Urine

Price- ~~₹780~~ **₹550**

Parameters Included

- CBC-complete blood count
- ESR- erythrocyte sedimentation rate
- Urine R/M, Urine Analysis
- Malaria Parasite Slide (MP slide)
- Widal

About This Test

The combination of **CBC (Complete Blood Count), ESR (Erythrocyte Sedimentation Rate), MP (Malaria Parasite), Widal, and Urine tests** is commonly used in the evaluation of fever to diagnose its underlying cause: - **CBC (Complete Blood Count):** Assesses overall blood health, detects anemia, and identifies signs of infection or inflammation through measures such as white blood cell count, hemoglobin levels, and platelet count. - **ESR (Erythrocyte Sedimentation Rate):** Measures the rate at which red blood cells settle at the bottom of a test tube over time. Elevated ESR levels indicate inflammation or infection but are not specific to a particular disease. - **M (Malaria Parasite):** Detects the presence of malaria parasites in the blood. This test is crucial for diagnosing malaria, a common cause of fever in endemic areas. - **Wid Test:** Identifies the presence of antibodies against Salmonella typhi and Salmonella paratyphi, helping to diagnose typhoid fever and paratyphoid fever. - **Urine Tests:* Includes urinalysis and urine culture to identify urinary tract infections (UTIs) or other abnormalities that could be causing fever. This combination of tests provides a comprehensive approach to diagnosing fever by evaluating various potential causes, including infections, inflammation, and specific diseases.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Same Day*
