## **FEVER PACKAGE 1**

Profile Details | 5 Parameters

Fasting: Fasting is not mandatory | Report Time: Same Day

Specimen Required: Blood, Urine

## Price- ₹780 ₹550

## **Parameters Included**

• CBC-complete blood count

• Urine R/M, Urine Analysis

Widal

- ESR- erythrocyte sedimentation rate
- Malaria Parasite Slide ( MP slide )

## **About This Test**

The combination of \*\*CBC (Complete Blood Count), ESR (Erythrocyte Sedimentation Rate), MP (Malaria Parasite), Widal, and Urine tests\*\* is commonly used in the evaluation of fever to diagnose its underlying cause: - \*\*CBC (Complete Blood Count):\*\* Assesses overall blood health, detects anemia, and identifies signs of infection or inflammation through measures such as white blood cell count, hemoglobin levels, and platelet count. - \*\*ESR (Erythrocyte Sedimentation Rate):\*\* Measures the rate at which red blood cells settle at the bottom of a test tube over time. Elevated ESR levels indicate inflammation or infection but are not specific to a particular disease. - \*\*M (Malaria Parasite):\*\* Detects the presence of malaria parasites in the blood. This test is crucial for diagnosing malaria, a common cause of fever in endemic areas. - \*\*Urine Tests:\* Identifies the presence of antibodies against Salmonella typhi and Salmonella paratyphi, helping to diagnose typhoid fever and paratyphoid fever. - \*\*Urine Tests:\* Includes urinalysis and urine culture to identify urinary tract infections (UTIs) or other abnormalities that could be causing fever. This combination of tests provides a comprehensive approach to diagnosing fever by evaluating various potential causes, including infections, inflammation, and specific diseases.
