

FIBRINOGEN

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹1200 **₹680**

Parameters Included

About This Test

A fibrinogen test measures the level of fibrinogen, a protein essential for blood clotting, in the blood. Fibrinogen is converted into fibrin during the clotting process to help form a stable blood clot. This test is used to evaluate bleeding disorders, monitor the severity of liver disease, and assess the risk of cardiovascular diseases. Abnormal levels may indicate conditions such as disseminated intravascular coagulation (DIC), liver disease, or an increased risk of thrombosis.
