

G6PD (QUANTITATIVE)

Profile Details | 1 Parameters

Fasting: Fasting not required | Report Time: Within 2 days

Specimen Required: Blood

Price- ₹1399 **₹699**

Parameters Included

About This Test

The G6PD test is a blood test that measures the level of glucose-6-phosphate dehydrogenase (G6PD), an enzyme found in red blood cells. This enzyme is essential for proper red blood cell function. A deficiency in G6PD can lead to the premature destruction of red blood cells, causing a condition known as hemolytic anemia. Doctors recommend this test if they suspect an individual may have a G6PD deficiency, particularly if there is a family history of the condition. People with G6PD deficiency need to avoid certain medications, foods, and infections that can trigger the breakdown of red blood cells. During the test, a blood sample is taken using a needle, which is then sent to a laboratory for analysis. The results typically take a few days to come back. Based on the results, doctors can provide appropriate treatment or advice to manage the condition.
