About This Test

The Glucose Challenge Test (GCT) is a screening test for gestational diabetes, typically conducted between 24 and 28 weeks of pregnancy. The fasting GCT involves measuring a woman's blood glucose level after an overnight fast. After the initial blood draw, she consumes a glucose solution, and her blood is tested again two hours later. This "2-hour" GCT assesses how her body processes sugar over time. Elevated glucose levels at either point can indicate gestational diabetes, prompting further diagnostic testing and management to ensure maternal and fetal health.
