Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 7 Days

Specimen Required: Blood

Price- ₹2400 **₹1590**

Parameters Included

About This Test

The Gliadin Deamidated IgA Antibody test measures the presence of immunoglobulin A (IgA) antibodies against deamidated gliadin peptides in the blood. This test is used to diagnose celiac disease, an autoimmune disorder where ingestion of gluten triggers an immune response that damages the small intestine. Elevated levels of these antibodies indicate an abnormal immune reaction to gluten, supporting a diagnosis of celiac disease. This test is particularly useful for detecting the condition in individuals with symptoms suggestive of celiac disease.
