

HEPATITIS C ANTIBODY- ANTI HCV QUANTITATIVE

Profile Details | 1 Parameters

Fasting: N/A | Report Time: Fasting is not mandatory

Specimen Required: Blood

Price- ₹900 **₹480**

Parameters Included

About This Test

HCV quantitative testing measures the amount of hepatitis C virus (HCV) RNA present in the blood. This test quantifies the viral load, providing a precise count of viral copies per milliliter. It is essential for assessing the severity of infection, monitoring treatment response, and determining the effectiveness of antiviral therapy. High viral loads may indicate active or more severe disease, while a decrease in viral load during treatment suggests a positive response. Quantitative HCV tests help guide clinical decisions, tailor treatment plans, and evaluate the risk of progression to chronic liver conditions.
