

HEPATITIS C VIRUS- HCV GENOTYPING

Profile Details | 1 Parameters
Fasting: Fasting is not mandatory | Report Time: Within 4 Days

Specimen Required: Blood

Price- ₹7000 **₹3350**

Parameters Included

About This Test

HCV genotyping measures the specific strain or type of Hepatitis C virus (HCV) present in a patient's blood. This test identifies the viral genotype, which is crucial for determining the appropriate treatment regimen and predicting the likelihood of treatment success. HCV has several genotypes, each with multiple subtypes, and knowing the genotype helps tailor antiviral therapy and manage the disease effectively. This test is typically used to guide treatment decisions and monitor the response to therapy.
