About This Test

HCV total antibodies test detects antibodies produced in response to hepatitis C virus (HCV) infection. A positive result indicates either a current or past infection with HCV It does not distinguish between acute, chronic, or resolved infections, nor does it measure the virus's presence or activity. A follow-up HCV RNA test is necessary to confirm active infection by detecting viral RNA. False positives can occur, especially in low-risk populations, so confirmatory testing is essential. HCV, a blood-borne virus, primarily spreads through sharing needles, blood transfusions, and, less commonly, sexual contact. Early detection is crucial for managing and potentially curing the infection with antiviral treatments. Regular monitoring and lifestyle adjustments can help prevent liver damage, including cirrhosis and liver cancer, associated with chronic HCV infection.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Within 2 Days*
