HEPATITIS D VIRUS DETECTION PCR - HDV

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 13 Days

Specimen Required: Blood

Price- ~~₹8000~~ **₹6390**

Parameters Included

About This Test

A Hepatitis D virus (HDV) detection PCR (Polymerase Chain Reaction) test measures the presence and amount of HDV RNA in a patient's blood. This test detects the genet material of the Hepatitis D virus, which indicates an active infection. Here are the key points: 1. **Detection of HDV RNA**: The PCR test identifies the presence of HDV RNA, confirming an active infection. 2. **Quantification**: It can measure the viral load, which helps in assessing the severity of the infection and monitoring the effectiveness of treatment. 3. **Early Detection**: PCR can detect the virus early in the infection, even before symptoms appear or antibodies are detectable. 4. **Monitoring**: It is used to monitor chronic HDV infection and the patient's response to antiviral therapy. PCR is a sensitive and specific method for diagnosing and managing Hepatitis D infection.

98% On-Time Reports	**100% Sample Accuracy**	**Free Home Collection**	**Expert Doctors**	**750+ Lab Tests**
Available 24×7	NABL Certified Labs	Door-to-Door Pickup	Across India	Trusted & Reliable

**Fasting 10–12 hrs essential | *Limited Period Offer | *Reports within Within 13 Days*
