About This Test

The HLA-B27 by PCR test detects the presence of the HLA-B27 antigen on white blood cells. HLA-B27 is a specific genetic marker associated with certain autoimmune conditions, such as ankylosing spondylitis, reactive arthritis, and other spondyloarthropathies. The PCR (polymerase chain reaction) method amplifies and identifies the HLA-B27 gene to determine if it is present. A positive result indicates that the HLA-B27 antigen is present, which may suggest an increased risk for these conditions, although it is not a definitive diagnostic tool on its own.
