

HLA- CELIAC DISEASE (DR- DQB1-DQA1 HAPLOTYPE ASSOCIATION INCLUDING DQ2, DC)

Profile Details | 1 Parameters

Fasting: Overnight fasting for 9-12 hours | Report Time: Within 3 Days

Specimen Required: Blood

Price- ₹6800 ₹5500

Parameters Included

About This Test

The HLA (Human Leukocyte Antigen) test for celiac disease measures the presence of specific HLA gene variants, particularly HLA-DQ2 and HLA-DQ8. These genetic markers are associated with an increased risk of developing celiac disease, an autoimmune condition triggered by gluten ingestion. While the presence of these HLA variants does not confirm celiac disease, their absence can help rule out the condition. The test is used alongside other diagnostic methods to assess genetic predisposition to celiac disease.
