About This Test

The Insulin Antibodies test measures the presence of antibodies that target insulin, a hormone produced by the pancreas. These antibodies can develop in response to insulin therapy or autoimmune conditions. In patients with Type 1 diabetes, insulin antibodies may form as part of the autoimmune attack on the pancreatic beta cells. The test helps in diagnosing autoimmune diabetes, assessing the impact of insulin therapy, and managing diabetes treatment. Elevated insulin antibodies can indicate insulin resistance or autoimmune reactions against administered insulin.
