

INSULIN- POST PRANDIAL (PP)

Profile Details | 1 Parameters

Fasting: Fasting not required | Report Time: Same day

Specimen Required: Blood

Price- ₹899 ₹499

Parameters Included

About This Test

Postprandial insulin (insulin PP) refers to the measurement of insulin levels in the bloodstream following a meal. It reflects the body's response to glucose intake and helps evaluate insulin secretion and sensitivity in response to food consumption. Elevated postprandial insulin levels can indicate insulin resistance, where cells do not adequately respond to insulin's signals to take up glucose, leading to higher blood sugar levels. This test is crucial in assessing metabolic health, particularly in diagnosing conditions like type 2 diabetes and guiding treatment strategies aimed at managing blood sugar levels effectively throughout the day.
