Profile Details | 1 Parameters

Fasting: Fasting not required | Report Time: Same day

Specimen Required: Blood

Price- ₹799 **₹399**

Parameters Included

- KFT-Kidney Function Test or RFT Renal Function Tes...

About This Test

Kidney Function Tests (KFT), also known as renal function tests, are a group of blood and urine tests used to evaluate how well the kidneys are functioning. These tests assess various aspects of kidney health, including filtration rate, electrolyte balance, and waste product clearance from the blood. Key components of KFT include serum creatinine, blood urea nitrogen (BUN), and estimated glomerular filtration rate (eGFR). Abnormal results may indicate acute or chronic kidney disease, urinary tract obstruction, or other conditions affecting kidney function. KFTs play a crucial role in diagnosing kidney disorders and guiding appropriate treatment to maintain optimal kidney health.
