

LE CELL

Profile Details | 1 Parameters

Fasting: Fasting is not mandatory | Report Time: Within 5 Days

Specimen Required: Blood

Price- ₹600 **₹349**

Parameters Included

About This Test

A LE (Lupus Erythematosus) cell test measures the presence of LE cells in the blood, which are white blood cells that have ingested the nuclear material of another cell. This test is primarily used to aid in the diagnosis of systemic lupus erythematosus (SLE), an autoimmune disease. The presence of LE cells indicates an autoimmune reaction where the body's immune system attacks its own tissues, helping to confirm a diagnosis of SLE and monitor disease activity.
