About This Test

The LH/FSH ratio measures the relative levels of luteinizing hormone (LH) and follicle-stimulating hormone (FSH) in the blood. These hormones, produced by the pituitary gland, play crucial roles in regulating the reproductive system. The LH/FSH ratio is often used to evaluate and diagnose reproductive health issues, including conditions such as polycystic ovary syndrome (PCOS) and hypothalamic amenorrhea. An imbalance in this ratio can indicate hormonal disruptions that affect menstrual cycles, ovulation, and fertility.
